Child Development Chart

Developmentally speaking . . . the human infant is a learner from birth. The parent or caregiver has the opportunity for providing the touching, the talking and the environment that will assure successful development. Knowing some of the signposts helps pave ways to play with the infant and toddler. If several behaviors are not observable in the child's development, it is recommended that the parents discuss the behaviors with their pediatrician.

Child / Staff Ratios

for Class I and Class II Child Care Homes

The numbers in the grid are the number of adults required for the number of children.
For example: If you have 3 infants under 16 months of age and 5 children 16 months of age and older, you would be required to have 1 caregiver.

The only time one (1) caregiver can care for twelve (12) children is when ALL children are 3 years of age or older.

Private schools, nursery schools, Co-ops, homes, which care for few than 5 children, before and after school are exempt from regulations.

Licensed Family Child Care Homes (LH)

Family child care homes are licensed and are located in a provider's home or a home structure. Homes are designed for multi-age group care. A home is limited to 12-16 children depending on the classification of their licensing. Their licenses should be posted, if you have a question regarding the number of children a provider should have. Specified child/staff ratios must also be met. See chart on opposite page.
